

## **Resource Consumption Policy**

Zeyt Inn Hotel implements a sustainability policy that addresses ecological balance and economic growth together, ensures the efficient use of natural resources, values environmental quality, and meets the needs of the present generation without compromising the ability of future generations to meet their own needs.

### **1. WATER MANAGEMENT**

**Greywater Recycling:** The greywater used in our facility is treated through advanced recycling processes and reused for garden irrigation.

**Rainwater Harvesting:** Rainwater collected from roofs is stored and used for garden irrigation. By prioritizing rainwater use, freshwater consumption is minimized.

**Solar Panels:** Our hot water needs are met through solar panels. These systems produce energy without consuming natural resources, reduce the environmental impact of fossil fuels, and lower our carbon footprint.

**Water Consumption Monitoring:** Water consumption is regularly monitored and evaluated to improve efficiency.

**Low Water Consumption Equipment:** Low-flow faucets, showerheads, and dual-flush systems are used to prevent unnecessary water consumption.

### **2. ENERGY MANAGEMENT**

**Energy Efficiency:** We use LED lighting, energy-saving devices, and motion sensor lighting systems.

**Awareness:** Employees and guests are informed about energy saving to prevent unnecessary electricity usage.

### **3. WASTE MANAGEMENT**

**Recycling:** All waste is separated and sent to recycling facilities. Waste separation stations are provided.

**Reducing Single-Use Plastics:** Single-use plastic products are minimized and replaced with biodegradable or reusable alternatives.

### **4. PROTECTION OF NATURAL RESOURCES**

**Local and Sustainable Resources:** We procure supplies from local and sustainable sources whenever possible.

**Ecosystem Protection:** Products used are environmentally friendly and do not harm nature.

### **5. EMPLOYEE AND GUEST PARTICIPATION**

**Training and Awareness:** Employees receive training on sustainability and resource efficiency.

**Guest Participation:** Guests are encouraged to save water and energy and join sustainable practices.

Resource consumption data is regularly monitored, and new targets are set to improve performance. The policy is reviewed annually.
